

# COLORSUITE

## AUTOMATED PRESS TO PROOF MATCHING SYSTEM

Winner at Canadian Print Awards  
“Most Progressive Printing Technology, Software”

# AUTOMATED PRESS TO PROOF MATCHING SYSTEM

Incorporating machine-learning and cloud-computing, ColorSuite offers an innovative and convenient press characterization process using a small colour target that can be included on live production runs. ColorSuite is a web-based SaaS solution that uses device link profiles to make press output efficiently match a printer's proof standard.

## **BENEFITS:**

- *Improve Colour Consistency Throughout Jobs*
- *Reduce Make Ready Time and Waste*
- *Profile Using Live Production Runs*
- *Proven Return on Investment*

# SEE THE DIFFERENCE YOURSELF

Printed using the  
**COLOR**SUITE Software

Printed  
Proof

Printed without using the  
ColorSuite Software

Using the ColorSuite process, your press is capable of reproducing your proof without making numerous press adjustments. ColorSuite's profiling algorithm creates a device link that provides new values on press that better correlate with your standard proofing condition and match it on the first make ready pull.

1

## HOW IT WORKS:

### ADD THE COLORSUITE TARGET

Place our scientifically developed test target on any production run and print to your stable press condition.

2

### SCAN THE COLORSUITE TARGET

Using the ColorSuite cloud app, scan a minimum of 3 targets from the production run using the provided scanner.

3

### CREATE THE COLORSUITE DEVICE LINK

After scanning, press the **“Create Profile”** button in the ColorSuite cloud app to generate your device link profile.

4

### MAKE PLATES

Download your device link from the cloud app and apply it to the plates for your next production run.

5

### MATCH YOUR PROOF

Print to a stable press condition and see how the first pull matches your standard proof.
